

StarUI Documentation

Documentation Index · docs/latest · generated 2026-08-15

The current documentation set for the StarUI (MarketsUI) platform.

DOCUMENT	WHAT IT COVERS	AUDIENCE
Platform Overview →	what StarUI is, capabilities at a glance	everyone — start here
Getting Started →	installing, first grid, theming, demo apps, platform dev loop	app builders + contributors
Architecture →	layer model, dependency graph, runtime host/port model, data services, build & consumption tracks — with diagrams	engineers + reviewers
Package Reference →	per-package reference: role, export subpaths, peers	anyone importing a package
SSRM Engine →	the transport-agnostic SSRM query/aggregation engine	engineers touching server-side row model
Provider Config Reference →	data-provider config reference — generated from the types	anyone authoring a provider
AppData →	the AppData key/value layer — mirror, hooks, <code>{{name.key}}</code> templates, asOfDate	app + provider authors
OpenFin →	running under the OpenFin workspace: seams, initWorkspace, theme, popouts, save/restore, linking	workspace integrators

Related references (outside this set)

DOCUMENT	PURPOSE
current-features.md	granular inventory of every shipped feature, kept in lockstep with code
APPS_REPO.md	the <code>apps/</code> tree: two consumption tracks, platform linking, workflows
WORKLOG.md	known-open items — check before starting work
COVERAGE_PLAN.md	the 70%-per-file coverage effort and its binding conventions

Print editions — each document in this set also ships as a PDF under `pdf/`, regenerated from the markdown by `pdf/build.mjs`.

One-off deep dives (hub fan-out optimizations, Sonar LCOV notes, the expression DSL) remain in `docs/`; superseded documentation is frozen in `docs/archive/`.
