

StarUI — Platform Overview

Platform Overview · docs/latest · generated 2026-08-15

StarUI is the MarketsUI platform: a TypeScript library monorepo for building trading-desk applications — data-dense grids, real-time market data, multi-window OpenFin workspaces — on one coherent design system.

What it gives you

MarketsGrid — the flagship surface. An opinionated AG Grid host with profile persistence (columns, filters, formats survive reloads and roam via a pluggable storage layer), a full grid customizer, Excel-style formatting toolbars, conditional formats, smart editing, alerts, and a configuration browser. One component, production defaults.

A token-driven design system — primitives, semantic tokens, themes and icons. Dark/light switching is one attribute flip (`data-theme` on `<html>`); the Tailwind preset themes the shadcn/ui primitives and the AG Grid adapter themes the grids from the same token tree, so every surface agrees.

Shared real-time data services — a SharedWorker owns a single upstream STOMP connection and fans snapshots plus thin field-level deltas out to every grid in every window. Twenty grids across five windows still cost one connection.

An OpenFin workspace shell — dock, home, notifications, child windows and config import/export, behind the same host/port contracts that also run in a plain browser tab. Widgets don't change between environments.

React building blocks — shadcn/Radix primitives pre-wired to the design system, a widget SDK, host wrappers and data bindings.

All of it rests on a framework-agnostic **core runtime** (grid engine, host ports, Dexie-backed config store, widget framework) and a dependency-free **types** package that defines the contracts.

Shape of the platform

Seven npm packages in strict layers — imports only flow downward:

External consumers install the packages by their real names from a registry — no aliases, no build glue. The repo's bundled demo apps consume the same packages two ways (live source and packed tarballs) precisely so that external consumption never silently breaks.
